May 1975

INTRODUCTION

The U.S.S.R., PRC, and the countries of Eastern Europe (E.E.) are the world's major centrally planned economies (CPE) and constitute a potential market of more than 1.3 billion people.

While the bulk of U.S.S.R. and Eastern European trade is intra-bloc, i.e. with each other, the portion with countries outside the bloc is rising to the point where the U.S.S.R. and Eastern Europe are becoming increasingly important markets for the United States and other trading nations.

As the PRC begins to play a more active role in world affairs, a revival of Western interest in trade is certain. What remains unknown is the extent to which the PRC will expose its economy and culture to Western influence. Nevertheless, in 1974, U.S. trade with the PRC was larger than with any other CPE. If for no other reason, the sheer magnitude of its population renders the PRC a potential market that cannot be ignored.

By 1974, U.S. trade (imports and exports) with this group of countries had grown to $3.3 billion, a dramatic increase from the pre-detente, 1971 level of only $650 million. However, there appear to be opportunities for further U.S. expansion. First, while intra-bloc CEMA trade has, in recent years, been about 65 percent of their total trade, this percentage appears to be declining, leaving a growing portion open to outside countries. Second, other industrialized nations of the Western world in recent years have captured between 15 and 20 percent of socialist trade, while the U.S. share has been only about 2 percent, leaving room for further U.S. market penetration.

This publication presents economic data intended to provide some insight into the potential of the U.S.S.R., the PRC, and the Eastern European markets for U.S. goods and services. It summarizes trade patterns between the centrally planned economies and the United States and other Western industrialized nations. Background economic and population data for the CPE's are included to show their development patterns and potentials.

The reader should be aware of the limitations of this publication. Most data are necessarily highly aggregated and may not provide the level of detail that individual users require. While some 1974 U.S. data is included, reliable data on trade between the CPE's and other industrialized Western nations are at this time available only through 1973.

Data pertaining to the "Industrialized West" (I.W.) were obtained from the United Nations. U.S. figures were compiled from U.S. Department of Commerce sources. Economic and population data of the CPE's were provided by other U.S. Government agencies. Use of these different sources may cause slight inconsistencies in some instances.

This annual publication is the third in a series prepared by George DeZelar of the Office of East-West Trade Analysis, Bureau of East-West Trade, U.S. Department of Commerce. Major changes this year include the addition of data on the People's Republic of China and more detailed data on the trade shares of 15 I.W. countries with each of 8 CPE's. Comments and suggestions on the content are invited and should be addressed to:

DEFINITIONS AND ABBREVIATIONS

Eastern Europe (E.E.)	-	Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania
PRC	-	People's Republic of China
Centrally Planned Economies (CPE's)	-	U.S.S.R., PRC, Eastern Europe
Industrialized West (I.W.)	-	Austria, Belgium-Luxembourg, Canada, Denmark, France, Italy, Japan, Netherlands, Norway, Sweden, Switzerland, United Kingdom, United States, West Germany
Other I.W.	-	I.W. minus U.S.
Other	-	Countries not included in the categories above
FT 155	-	Bureau of Census publication of U.S. imports (annual)
FT 455	-	Bureau of Census publication of U.S. exports (annual)
SITC	-	Standard International Trade Classification

1/ Estimates based on the value of crop production plus the value of livestock products, with allowance for changes in livestock numbers, but minus feed (including grain imported for feed), seed, and waste. FAO/OECD WEST EUROPEAN REGIONAL PRICE WEIGHTS (1952-56 average) were used to compute the indexes.

2/ These indexes are measures of the "gross" value of production of industry at constant prices. The gross value of production is, in general, the sum of the value of output of all industrial enterprises. The definition of industry in Communist countries includes not only manufacturing, mining, and public utilities, as in most Western definitions of industry, but also certain other activities (varying from country to country).

3/ Based on estimates of grain and cotton production.

4/ Estimates computed by applying value added weights to data for commodity production. The data are fragmentary and uncertain. Therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production.
